

**BC2A<sup>®</sup>** product line provides a fully scalable command and control solution covering the battlefield requirements from section level up to division headquarters and beyond.

**BC2A<sup>®</sup>** products use an open architecture and a flexible command and control framework dedicated to support BiSCAIS functional and core services.

### Seamless operation over low bandwidth CNR environment

**BC2A<sup>®</sup>** products are designed specifically to operate in the low bandwidth CNR environment specific to the tactical level providing seamless communications over non-homogeneous VHF and HF networks.

### Unprecedented Flexibility - customization

**BC2A<sup>®</sup>** products facilitate nearly every aspect of command and control through modular add-ons which rest on top of a flexible framework architecture.

### Capacity to Meet C4I Needs Well into the Future

**BC2A<sup>®</sup>** products are designed specifically to evolve the solution to any need. The core framework architecture need not change to realize incremental growth of functionality.

### A complete NATO interoperable solution

Interoperability is assured by **BC2A<sup>®</sup>** through the implementation of the following standards: STANAG 5525 (JC3IEDM), STANAG 5527 (NFFI), APP-6 (NATO Military Symbols for Land Based Systems) and AdatP-3 (NATO Message Text Formatting System). These standards ensure the exchange of accurate real time situation awareness information among NATO forces.
